EXPERIENCE

Thomas Pongetti has more than fifteen years of experience in atmospheric observations. He has played a key role in all stages of FTS remote sensing at both Table Mountain and Mount Wilson Observatories and the in situ measurement network of the Megacities Carbon Project. He has made major contributions to instrument design and the infrastructure of the remote sensing and in situ sites at mountain observatories and several roof top and tower sites in the LA basin. He has proficiency in optical systems, detectors, coatings, and alignments; recently serving as the optical ground support engineer on the OCO-3 TVac testing. His automation of the control and data acquisition of the CLARS-FTS and FTUVS has allowed for continuous operation every clear day of the year. He possesses intimate knowledge of every level of the atmospheric absorption retrieval process and plays a key role in the algorithm development for all data products originating from these spectrometers. He has organized, formatted, and quality checked the large data sets so new data is quickly shared with other users or posted publicly. In addition to his scientific R&D contributions he also serves as the site engineer at the CLARS and FTUVS observation facilities leading in all electrical, optical, and mechanical endeavors at each location.

EDUCATION

M.S., Physics, CSU Fullerton	2005
B.S., Physics, CSU Fullerton	2001

PROFESSIONAL EXPERIENCE

Jet Propulsion Laboratory, California Institute of Technology	
Technologist	2016- present
Scientist	2009–2016
Technical Staff	2002–2009
